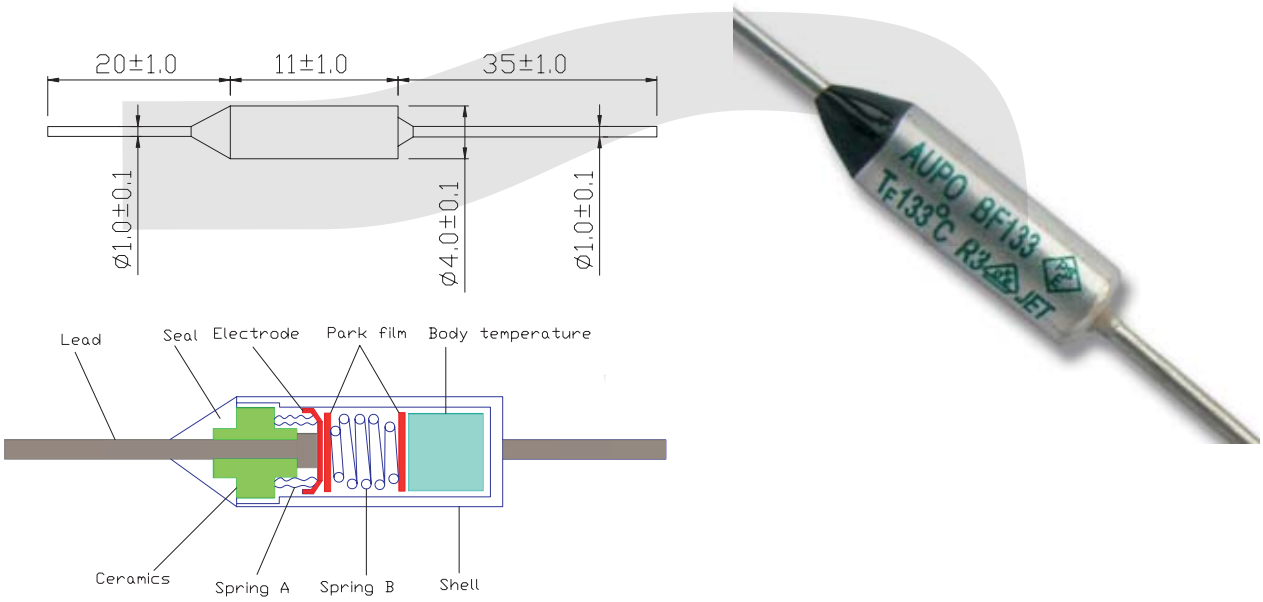
Thermal Fuse Series

KLS5-103 Steel-type Thermal Fuse Series



Rated functioning temperature(Tf): The temperature at which a Thermal Cutoff changes its state of conductivity to open circuit detection curret.The tolerance according to IEC60691 is from -10°C~+0°C .(With Japan Electrical Appliance and Material Law,on the other hand,they must function in the tolerance range of ±7°C).

Fusing(cut)-off temperature: The fusing-off temperature indicates value measured in silicon oil with a temperature increased by 0.5-1°C per minute and a detective current 100mA or less.

Holding temperature(Th): The maximum temperature at which a thermal Cutoff will not cause a change in state of conductivity to open circuit while conducting rated current for 168 hours. This rating is required by safety standards based on IEC60691.

Maximum temperature limit(Tm): The maximum temperature at which a Thermal Cutoff can be maimtained for 10 minutes without reclosing.This rating is requirde by safety standards based on IEC60691.

Rated current(Ir): The allowable maximum current which a Thermal Cutoff is able to carry.

Rated current(Ur): The allowable maximum voltage which a Thermal Cutoff is able to be applied.

Rated functioning temperature(Tf): The temperature at which a Thermal Cutoff changes its state of conductivity to open circuit detection curret.The tolerance according to IEC60691 is from -10ºC~+0ºC .(With Japan Electrical Appliance and Material Law,on the other hand,they must function in the tolerance range of ±7ºC).

Fusing(cut)-off temperature: The fusing-off temperature indicates value measured in silicon oil with a temperature increased by 0.5-1ºC per minute and a detective current 100mA or less.

Holding temperature(Th): The maximum temperature at which a thermal Cutoff will not cause a change in state of conductivity to open circuit while conducting rated current for 168 hours. This rating is required by safety standards based on IEC60691.

Maximum temperature limit(Tm): The maximum temperature at which a Thermal Cutoff can be maimtained for 10 minutes without reclosing.This rating is requirde by safety standards based on IEC60691.

Rated current(Ir): The allowable maximum current which a Thermal Cutoff is able to carry.

Rated current(Ur): The allowable maximum voltage which a Thermal Cutoff is able to be applied.

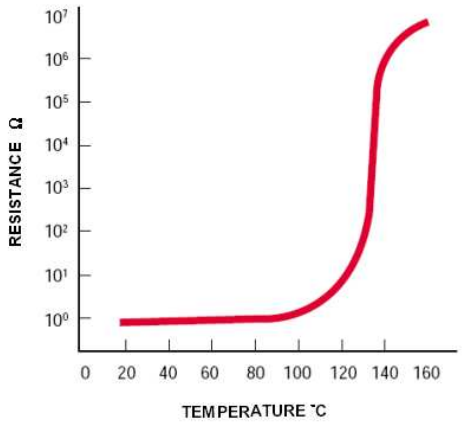
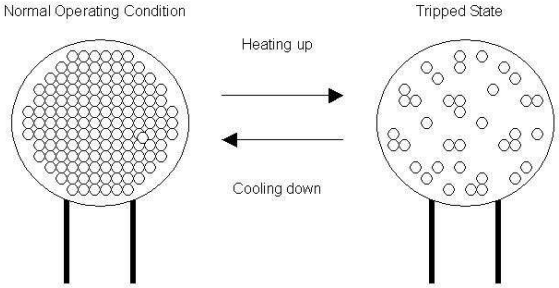
HOW DOES THE RESETTABLE FUSE ORK

Resettable fuses are designed and made of patented novel polymeric PTC material in thin chip form . With electrodes and leads attached on both sides, it is placed in series to protect a circuit. At "normal operating condition" the device remains at an extremely low resistance (milli-ohms) and allows the electrical current to flow through it without any restriction. When overcurrent conditions occur, the polymeric PTC material heats up and its resistance increases sharply. Such a sharp resistance increase (to an insulated status) cuts off the current in the circuit, and consequently protects the element and device in the circuit. Upon fault current being removed, the resettable fuse cools and its resistance drops to the original extremely low value. The resettable fuse is "reset" and allows the current through the circuit again.





TRIP CURRENT, HOLD CURRENT AND THERMAL DERATING

Trip Current (IT) and Hold Current (IH) of Sinochip resettable fuse are rated at 23℃. Typically its Trip Current is twice as much as its Hold Current. Sinochip device does not trip at or below its rated Hold Current, and will trip at or above its Trip Current value. However, due to PTC effect both IT and IH reduce with ambient temperature increase and vice versa. As shown bellow, the currents are reduced nearly 50% at 85℃ and increased to 150% at -40℃.

PTC Thermistor Series

KLS6-MZ11A Filament Preheat PTC Thermistor Series

1. Applications

It can be applied in the electronic ballast of kinds of fluorescent lamps and electronic energy-saving lamps.No necessity to modify the circuitry.If proper thermistor is parallel connected on the two ends of resonant capacitor of lamps, cold startup of electronic ballast and electronic energy-saving lamps will turn into the Preheatstartup which can make the Preheatingtime reach 0.4-2S and extend the life of service to three times of the primary.

2. Characteristics

Execution utilizing the characteristic of PTC material, Small size of product, High voltage resistance, Longevity of service, Low power when normally working.

3. Application principal

Preheatstartup principium of PTC thermistor is showed in following chart: At initial moment of turning on the switch, R_t is on normal temperature state, its resistance is far below that of C_2, and the current passes through C_1 and R_t and comes into being loop warming up the Filamnet, About 0.4-2s later, the temperature of R_t exceeds courier temperature T_c and jumps into the state of high resistance far over that of C_2, and the current passes through C_1, C_2, comes into being loop and results in LC resonance which generates high voltage to light the lamps.

PTC Thermistor Series

KLS6-MZ11B PTC Thermistor Series

1. Applications

MZ11B PTC thermistor series is mainly applied in the zero-temperature-rise and zero-consumption preheat startup of high-performance ballasts and energy-saving lamps.

2.Principal

MZ11 B series PTC thermister is a kind of compound element which Rt of PTC thermistor is in series of Rv of varistor.when turn on the switch, voltage is higher than Rv's varistor voltage, Rv is in conduction state, it's proceed of preheating startup is basically independent completed by Rt, the startup spot of lamp pipe is in normal operating state, voltage declines below the Rv's varistor voltage, Rv is on break-open state, then make zero power-consumption and zero temperature-up comes true.

Selection of M2 11B series is basically familiar with MZ11A series.there lies one difference Namely, Rv's varistor voltage should be slightly higher than lamp pipe's voltage.

PTC Thermistor Series

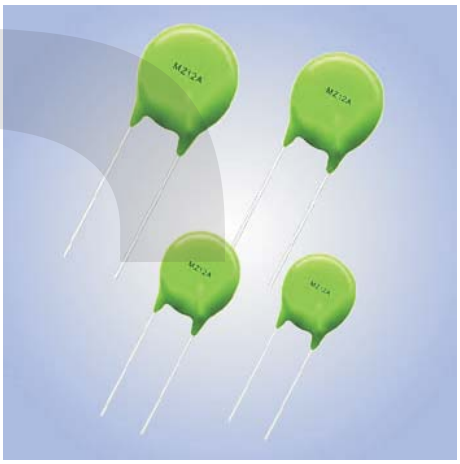
KLS6-MZ12A PTC Thermistor Series



1.Application

MZ12A thermistor is mainly applied in abnormal current and thermal protection of electronic ballast (energy-saving lamp, electronic transformer, multimeter, intellectualized ammeter etc.). It can be in series of the load circuitry right and clamp the excessive current or interdict the current automatically in exceptional conditions, and come back the primary state automatically after the trouble eliminating.It is called ten-thousand time fuse.

2.Characteristics

- No-touch-point circuit and elements protection
- Clamping the excessive current automatically
- Coming back auto.after trouble eliminating
- No noise or sparkle in operating
- Security working, operating easliy

3.Principal

MZ12A thermistor in series of the power supply loop, the current passing through PTC will be less than the ratedcurnt, PTC will be normal, its resistance will be very litle and the normal work of protected circuitries of electronic ballast (energy-saving lamp, transformer , multimeter etc.) will not be influenced when circuitry is in normal state.And PTC will heat suddenly, its resistance will rise up to the high-resistance state suddenly accordingly so as to clamp or interdict the current auto matically to protect the circuitry from damage when the current is far over the rated value.After the current come back the normal state, PTC will also come back low-resistance state automatically and the circuitry will work normally again.

In the field of Surge current protection of electronic ballast (energy-saving lamp, transformer, multimeter etc.).

NTC Thermistor Series

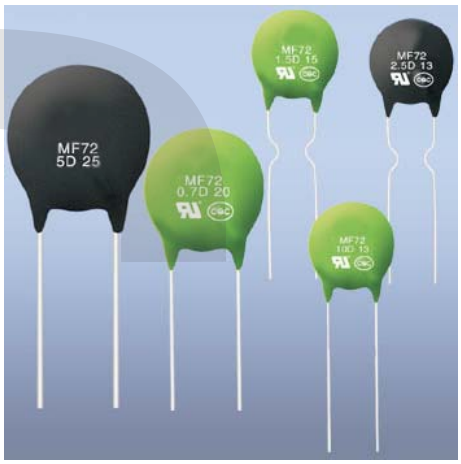
KLS6-MF72 Power NTC Thermistors Series

1.Introduction

An NTC thermistor has to be connected in series to the power source circuit to avoid the surge current at the instant when the electronic circuits are turned on. The device can effectively suppress the surge current, and its resistance and power consumption can be greatly reduced after that through the continuous effect of the current so as not to affect the normal work current. Therefore the Power NTC thermistor is the most convenient and efficient instrument to curb the surge current and protect the electronic devices from being damaged.



2. Applications

Applicable to the protection of the power circuits of conversion power supply, switching power supply, UPS power supply, electric heaters, electronic energy-saving amps, electronic ballasts and other electronic devices, and the filament protection of color picture tubes, incandescent amps and other lights.

3.Characteristics:

Small size,Strong power and strong capability of surge current protection.
Characteristics Fast response to the rapidly surge.
Big material constant(B value),Small remain resistance.
Longevity of service,High reliability.
Integral series,Extensive operating range.

Marking on the Resistors Body:

- For 0402 size, no marking on the body due to the small size of the resistor.
- ±5% tolerance product. (Including resistance values less than 1Ω; both 1% and 5%) The marking is 3 digits, the first 2 digits are the significant figures of the resistance and the 3rd digit denotes number of zeros.

153 = 15000Ω = 15KΩ; **120** = 12Ω

Below 10Ω shown as this: **6R8** = 6.8Ω

- 1% tolerance marking of case size 0805 and bigger is 4 digits, the first 3 digits are the significant figures of the resistance and the 4th digit denotes number of zeros.

2372 = 23700Ω = 23.7KΩ; **1430** = 143Ω

Ceramic Resonator Series

KLS14-ZTA Ceramic Resonator Series

Resonators ZTA (MHz) series cover the frequency range of 1.79 Mhz to 60.00 MHz with an initial frequency tolerance fo±0.5%.

Since the ZTA series utilizes the thickness mode of vibration of the piezoelectric element, there is little dimensional change with frequency. All ZTA are epoxy coated and completely washable. Tape and reel package are both available.

Ceramic Resonator Series

KLS14-ZTB Ceramic Resonator Series

Resonator ZTB (kHz) Series is designed to provide the design engineer with a rugged, relatively low frequency device in the frequency range of 190 kHz to 1,250 kHz. Initial frequency tolerance is ± 0.5% which compares very favorably to the norminal ± 2% ~ ± 3% requirements of one chip microprocessors.

ZTB series utilizes the area vibration mode of the piezoelectric element.

Ceramic LT10.7 Filter is monolithic devices which utilize the energy-trapped thickness vibration-mode. This principle of operation is based upon the fact that an excellent resonating element with low spurious vibration can be obtained by adhering to certain theoretical parameters of design.

These parameters include the physical dimensions of the ceramic element, the electrode pattern, and the associated mass loading effect of the electrodes. In addition to employing the principle of energy-trapped thickness shear vibration-mode, Token China also utilizes the theory of the multicoupling mode. In short, this theory utilizes divided electrodes to "trap" different frequencies simultaneously.

The advantages of Token China's multicoupling mode technology is a highly selective, integrated device that allows a single piezo substrate to contain a number of coupled resonators.

Token China categorizes the LT 10.7 family according to rank of center frequency. This ranking indicates that a given LT 10.7 will be marked with one of the colors listed in the following chart and will exhibit the center frequency characteristics specified below.

Ceramic Capacitors Series

KLS10-MLCC (SMD Multilayer Ceramic Capacitors Type)

X

MLCC Series

- Stringent dimensional tolerance allow highly reliable,high speed automatic chip mounting on PCBs.
- Terminal are plated with Ni and solder, suited to flow and reflow soldering
- High insulation resistance and high reliability
- These capacitors have temperature chatacteristics ranging from COG to Y5V, applied to general electronic equipment, instrument panel and household electric appliances

■ Capacitor Selection

The choice of dielectric is largely determined by the temperature stability required:

- **NPO(COG)**

Ultra stable C lass I dielectric, with predictable change of electrical properties on temperature,voltage, frequency and time. Used in circuits requiring stable performance.

- **X7R**

Stable Class II dielectric, with predictable change of properties with temperature,voltage,frequency and time. Used as blocking, coupling, by- passing and frequency discri minating elements.
This dielectric is ferroelectric and offers higher capacitance ranges than class I.

- **Y5V(Z5U)**

General purpose Class II dielectric with highest dielectric constant and greater variation of properties with temperature and test conditions. Very high capacitance per unit volume and suited

for application as well as filtering, transient suppression blocking, and charge storage application.

Temperature Rating	-20℃+105℃	Insulation Material	PVC
Rated voltage	300V	Conductor material	bare copper/tinned copper/sliver copper

• Features:
This cable insulation using soft PVC materials, resulting in a high degree of flexibility. 7 tin conductor using copper wire woven from strangulation, cleared fields, connect the two ends of high-density connectors, you can optimize the structure of the device can reduce the welding equipment in the internal space.
• This product is environmentally friendly. The insulator does not contain specific bromide-based fire retardant (PBDE or PBB) or the heavy metals Pb, Cr6+, Cd and Hg. It also conforms to the RoHS (restriction of the use of certain hazardous substances in electrical and electronic equipment) regulations.
• Applications :
This product can be used in computers and peripherals, communications equipment, office equipment, numerical control equipment, internal wiring, in particular, the ideal high-density wiring, the fixed-line optimization in- house.

♦ **Features**

1. Easy one-step I.D.C. connection without insulation stripping at the mass-termination section.
2. Ten colors allow easy termination, connecting and branching at unfused parts.
3. Free wiring direction change and high adaptability to wiring place because the unfused parts of the cable can be rounded.

♦ **Application**

Internal wiring of computers, measurement control devices, business machines, communication devices, and other electronic equipment.

Rainbow Flat Cable Series

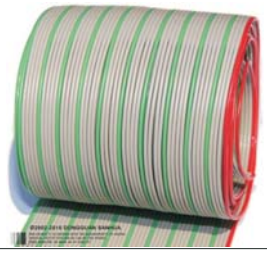
KLS17-1.27-CFC (UI4539)

●Due to the use of our unique technology, this cable has the same flexibility and electrical characteristics as those of conventional cables, despite the use of non-PCV/non-halogen resin for the insulation material.
●This product is environmentally friendly. It also conforms to the RoHS regulations (which limit the use of specific substances contained in electrical and electronic equipment).
●The flame retardant rating is 105degrees, which is the same as that of the PVC type.



Applications

●Ideal for connecting equipment such as computers, peripheral equipment, communication equipment, and office equipment and also for internal fixed wiring.

♦ **Features**

1. Easy one-step I.D.C. connection without insulation stripping at the mass-termination section.
