Smart Card Connector Series

KLS1-ISC-008A Smart Card Connector

Application scope

- It is mainly applied in water meter, kilowatthour meter, gas meter, IC telephone, gate inhibition and common facilities for reading and writing.

Characteristic

- IC card and wit card correspondent to standard ISO7816
- Totally sealed inside friction type with dust-avoiding door. Elicit with hull wire or flat wire.Eliciting with hull wire takes little space, thickness of the wire: 0.2mm; eliciting with flat wire is cheaper.
- It's convenient to install and fix without soldering.
- deviced with spring piece inside, avoiding destroyed by matters such as iron wire, bamboo tag and so on.
- The spring piece is scientificly designed and shaped with import automatic punching tooling machine. The precision is high, The contact is arranged neatly, elasticity is strong and well-balanced and it is unanimous to feel.
- gold-plating: plate wear-resisting gold in contact with automatic gold-plating assembly line, quality is good and steady.Thickness of plating is several times of common gold-plating and the gritting nature is good.
- The switch is made with the monopoly technic (monopoly No.ZL022.35976.1), disconnection distance is accurate and steady, error is no more than 0.02mm, touch strongly to insure the stability when using.

Instruction

- As for A28, because of the impact of seal loop, we advise installation distance is 26.2mm.
- As for B3, in order to make the surface of card seat in the same level with products, we advise users this size should be 5mm. (3 + distance of encapsulated seal loop = 5mm).
- The length of hull wire is 90mm, the interval is 1.25mm.The length of flat wire is choosable.
- The size of terminal surface: 67.3x12mm
- times of pulling out and inserting> 100,000
- you can choose normal open or normal close.
- This pattern is made by monopoly technic, with protection device and it is a new generation product.

BNC Connectors

KLS offers 50 and 75 ohm BNC connectors. Please visit following pages for details.

The **BNC** connector (Bayonet Neill–Concelman) is a common type of RF connector used for coaxial cable. It is used with radio, television, and other radio-frequency electronic equipment, test instruments, video signals, and was once a popular computer network connector.

The **BNC** connectors are made to match the characteristic impedance of cable at either 50 ohms or 75 ohms.It is usually applied for frequencies below 3 GHz [1] and voltages below 500 Volts. [2] Similar connectors husing the bayonet connection principle exist, and a threaded connector is also available.
